

ABSTRACT

An object of the present invention is to provide an e-mail editing device having excellent operability, in particular, an e-mail editing device capable of switching and displaying related e-mails. A display processor (27) simultaneously displays a message
5 editing screen (32) for displaying an edition mail (24) and a mail reference screen (33) for displaying a reference mail (25) for reference. A reference processor (23) copies an object in the reference mail (25) to a temporary storage (22). An editor (21) pastes the object to an edition mail. A mail search portion (28) searches for an e-mail in a
10 memory (14) on the basis of the reference mail (25). When a user performs a mail switching operation, the reference mail (25) is switched to a searched e-mail for display.
